Lot 7 on TS158 is in the name of the Torres Strait Island Regional Council and as such is Indigenous Land.

Lot 9 on CP894533 is a Reserve with the Torres Strait Island Regional Council as Trustees (Basefiled on 19/07/90 Page 129-1291) and as such is treated as Indigenous Land.

Lots 16, 20, 51, 52, 81, 82, 85, 86, 93, 100, 128, 136, 140, 150, 157, 160, 161, 164, 172 & 173 have been derived by digital overlay of FLD558 with current imagery in order to best describe the original intent/spatial position and dimensions of these lots.

Sheet of 25

SURVEY REPORT

AMBULATORY BOUNDARY REPORT

Budu DOGIT (Lot 7 on TS158) is Indigenous Land with an extent & form (for provisions of Part 7 of the Survey & Mapping Infrastructure Act 2003)

We have therefore utilised the existing definition of the boundaries and the reduced survey standards as set out in the Cadastral Survey Requirements Section 3.31 - Remote Area Surveys.

Survey plan TS158 indicates that the tidal boundary has been compiled from 1:100 000 Topographic Map 7377, has not been surveyed and should be determined by the Mean High Water Mark at Spring Tides.

The tidal boundary has been determined using a combination of field survey and digital imagery owned by DMU (Bodu Satellite Quilted Copyright Digital Globe - dated 6 December 2006).

We have made connections to the tidal boundaries in numerous locations along the eastern & western coastlines including significant survey adjacent to the village area. From these observations, we are satisfied the position of accuracy of the ambulatory boundary determined from imagery is within 3-4 metres along beaches/mangroves and within 1-2 metres where clearly defined natural features are visible.

Five sections of the tidal boundary within the village area have been determined directly by field survey adopting the following natural features as the definition of HWM or MHWS.

Tidal Boundary

Stations J-K (Sheet 16)

Stations L-M (Sheet 17)

Stations N-O (Sheet 21)

Stations A-B (Sheet 23)

Stations 114b-114c (Sheet 23)

Natural Features

Top of clearly evident and stable embankment at the top of the beach.

Top of clearly evident and stable embankment at the top of the beach.

See Sheet 21 for descriptions.

Seaward edge of concrete Seawall.

Top of stable rock embankment.

ADDITIONAL SHEET
AMBULATORY BOUNDARY REPORT

Sheet 21 of 21

Land Use Act 1994 Land Act 1994 Form 21A (Version 1)

- Lot 2 on SP253569 is indigenous land and is exempt from the provisions of Part 7 of the Survey & Mapping Infrastructure Act 2003.
- We have therefore utilised the existing definition of the boundaries and the reduced survey standards as set out in the Cadastral Survey Requirements Section 3.31 - Remote Area Surveys.
- Survey plan 15156 (the original grant) indicates that the tidal boundary has been computed from 1:100 000 Topographic Map 7377. Has not been surveyed and should be determined by the Mean High Water Mark at Spring Tides.
- The tidal boundary has been determined using a combination of field survey and digital imagery owned by DNRM (Babu Satellite Quickbird Copyright Digital Globe - dated 6 December 2006). See field notes lodged with SP253569 for a copy of the tidal boundary and digital imagery.
- We have made connections to the tidal boundaries in numerous locations along the coastlines adjacent to the village area. From these observations, we are satisfied the positional accuracy of the ambulatory boundary determined from imagery is within 3-4 metres along beaches/mangroves and within 1-2 metres where clearly defined natural features are visible.
- Two sections of the tidal boundary within the village area have been determined directly by field survey adapting the following natural features as the definition of NMI at MHW:

Tidal Boundary	Natural Feature
Stations A-R (Sheet 18)	Seaward edge of concrete seawall and top of stable embankment in southern section (see table).
Stations 115e-114b (Sheet 19)	Top of rock embankment
